

svc-beta Disaster Recovery Runbook

Overview

svc-beta is the internal billing ledger service. Primary region us-east-1, secondary us-west-2.

Recovery Objectives

- **RTO:** 10 minutes from declared incident to restored primary traffic.
- **RPO:** 2 minutes.

Failover Procedure

1. On-call declares incident in #svc-beta-incidents.
2. Run `./scripts/failover.sh us-west-2``.
3. Confirm DNS cutover via `dig api.svc-beta.internal``.
4. Run smoke test suite (`make smoke-test``).
5. Announce failover complete in incident channel.

Rollback

1. Verify ledger write queue is drained on the promoted replica.
2. Run `./scripts/rollback.sh us-east-1`` to repoint DNS and demote us-west-2 back to replica.
3. Run reconciliation job (`make reconcile-ledger``) to confirm no writes were lost during the window.
4. Announce rollback complete in incident channel.
